

Safety Information and Pigment

Safety

There are two priorities at 3D Brows and Wellness LLC:

1. Your safety
2. The safety of your technician

Microblading is regulated in the State of Wisconsin by the Department of Safety and Professional Services; therefore, proper rules have been established and are always followed to ensure you have the best, safest experience while going through the service.

All microblading tools are single use disposable. Proper preparation and clean-up after your procedure align with OSHA's Bloodborne Pathogen and Infection Control for Body Art Professionals standards.

It is against the law in the State of Wisconsin for any person under the age of 18 to receive a tattoo, even with parental consent. This is for the safety of all minors.

Li Pigments (Ink)

3D Brows and Wellness LLC uses *LI Pigments* for all microblading procedures. LI Pigments follows high quality control standards and all permanent cosmetic pigments are manufactured using ingredients which are certified and approved by the Food, Drug and Cosmetic Act.

LI Pigments recognized early on the need for pigments that stay, hold true to color over time and do not change color. Pioneers in the cosmetic ink industry, LI Pigments made a few simple formula modifications and a unique mixing process to create a revolutionary pigment line, "Aqua & Velvet." Aqua & Velvet infuses ingredients for a natural, long lasting color; hence, 3D Brows and Wellness LLC bring this amazing line to your eyebrows.

Questions are always welcome regarding the safety procedures and pigments used at 3D Brows and Wellness LLC
