

Advantages of 3D Brows

Although everyone's decision is unique, below are some reasons why clients have chosen microblading.

Convenience

- Time saver from having to use makeup to put on your eyebrows every day
- No worries about your eyebrows wiping off when swimming or doing other water sports
- If you have a very active lifestyle, your brows will always be filled in
- Poor vision or steadiness of the hand which impairs the ability to effectively draw on eyebrows

Cosmetic

- Having the correct size, shape, and color for your eyebrows can act as an eyelift
- Blondes and redheads often have light eyebrow hair and would like a darker color

Medical

Any client with medical reasons for eyebrow hair loss must consult with their doctor before getting 3D brows

- Conditions that can cause eyebrow hair loss such as:
 - Alopecia Areata (autoimmune disease)
 - Trichotillomania (Body-Focused Repetitive Behavior, classified as an "Obsessive Compulsive and Related Disorder")
 - Lupus (disease marked by inflammation of the skin)
 - Hansen's Disease/Leprosy – (infection that can affect the eyebrow area leading to permanent eyebrow loss)
 - Thyroid Disease (typically an underactive thyroid/hypothyroidism)
 - Naturally thinning brows with age
- Chemotherapy
 - It is not uncommon for eyebrows to stop growing back after chemo; or, if they do – not nearly as full. Clients must be completely finished with chemo and have doctor approval for microblading after undergoing chemo treatments.
- Nutrient Deficiency
 - Affects the ability of hair follicle growth
- Dermatology Reasons
 - There are forms of eczema that cause red, itchy patches of skin. When this happens around the eyes, it can lead to swelling, skin inflammation and loss of eyebrow hairs, (often from constant scratching or rubbing from the itching).
- Allergic reactions or sensitivity to over the counter eyebrow products

Whatever your reason, 3D Brows and Wellness is happy to help!
